

## EPAM-LAB12

Develop a web application to perform CRUD operations on EMP details using ASP.NET MVC.

In Controllers folder create three files and in models 4 files as shown in the below fig:

- In Views folder create 3 other folders

Controllers/EmplyeeController.cs

```

FirstApp
1  using FirstApp.Models;
2  using Microsoft.AspNetCore.Mvc;
3  namespace FirstApp.Controllers{
4      public class EmployeeController : Controller {
5          public IActionResult Index() {
6              return View(Repository.AllEmployees);
7          }
8          public IActionResult Create() {
9              return View();
10         }
11         [HttpPost]
12         public IActionResult Create(Employee employee) {
13             if (ModelState.IsValid) {
14                 Repository.Create(employee);
15                 return View("Thanks", employee);
16             }
17             else
18                 return View();
19         }
20         public IActionResult Update(string empname) {
21             Employee employee = Repository.AllEmployees.Where(e => e.Name == empname).FirstOrDefault();
22             return View(employee);
23         }
24         [HttpPost]
25         public IActionResult Update(Employee employee, string empname){
26             if (ModelState.IsValid) {
27                 Repository.AllEmployees.Where(e => e.Name == empname).FirstOrDefault().Age = employee.Age;
28                 Repository.AllEmployees.Where(e => e.Name == empname).FirstOrDefault().Salary = employee.Salary;
29                 Repository.AllEmployees.Where(e => e.Name == empname).FirstOrDefault().Department = employee.Department;
30                 Repository.AllEmployees.Where(e => e.Name == empname).FirstOrDefault().Sex = employee.Sex;
31                 Repository.AllEmployees.Where(e => e.Name == empname).FirstOrDefault().Name = employee.Name;
32             }
33             return RedirectToAction("Index"); }
34         else
35             return View(); }
36         [HttpPost]
37         public IActionResult Delete(string empname){
38             Employee employee = Repository.AllEmployees.Where(e => e.Name == empname).FirstOrDefault();
39             Repository.Delete(employee);
40             return RedirectToAction("Index");
41         }
42     }
43 }

```

## Controllers/FirstController.cs

```

FirstApp
1  using FirstApp.Models;
2  using Microsoft.AspNetCore.Mvc;
3  namespace FirstApp.Controllers{
4      public class FirstController : Controller {
5          public string Index() {
6              return "Hello World";
7          }
8          public IActionResult Hello() {
9              ViewBag.Message = "Hello World";
10             return View();
11         }
12         public IActionResult Info() {
13             Person person = new Person();
14             person.Name = "Bhavana";
15             person.Age = 18;
16             person.Location = "India";
17             return View(person);
18         }
19     }
20 }

```

## Controllers/HomeController.cs

```
FirstApp
1 using FirstApp.Models;
2 using Microsoft.AspNetCore.Mvc;
3 using System.Diagnostics;
4 namespace FirstApp.Controllers{
5     public class HomeController : Controller {
6         private readonly ILogger<HomeController> _logger;
7         public HomeController(ILogger<HomeController> logger) {
8             _logger = logger;
9         }
10        public IActionResult Index() {
11            return View();
12        }
13        public IActionResult Privacy() {
14            return View();
15        }
16        [ResponseCache(Duration = 0, Location = ResponseCacheLocation.None, NoStore = true)]
17        public IActionResult Error()
18        {
19            return View(new ErrorViewModel { RequestId = Activity.Current?.Id ?? HttpContext.TraceIdentifier });
20        }
21    }
22 }
```

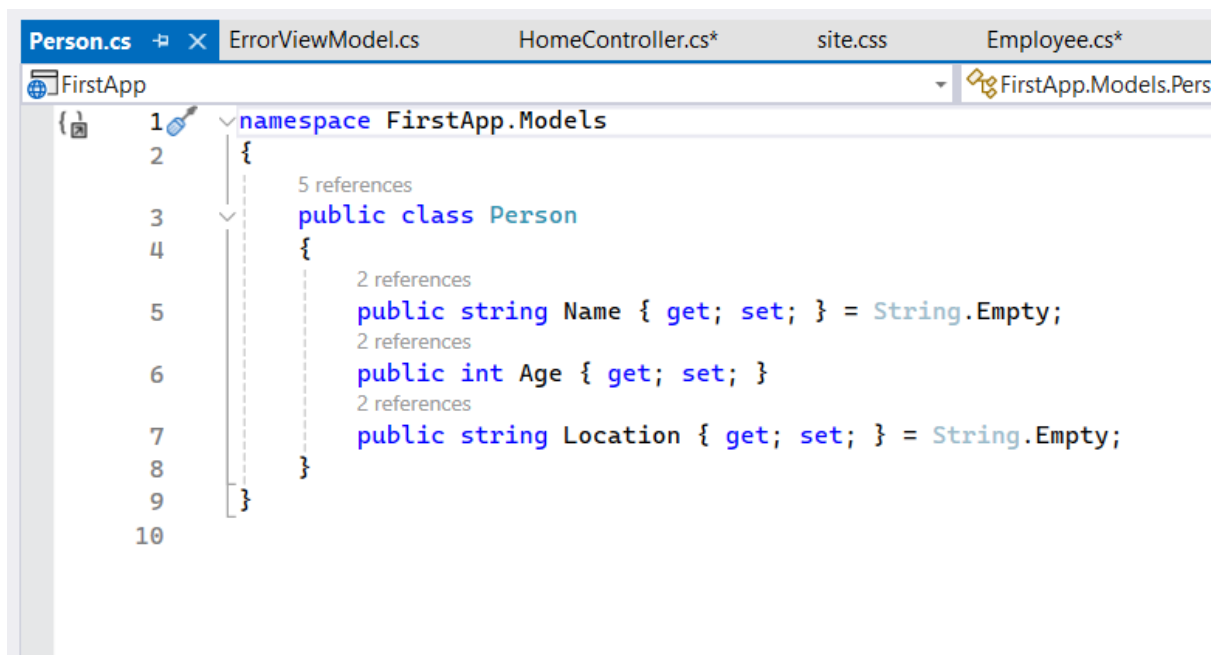

## Models/EmployeeModel.cs

```
HomeController.cs*  site.css  Employee.cs*  _Layout.cshtml  Index.cshtml  Update.cshtml  Index.cshtml
FirstApp
1 using System.ComponentModel.DataAnnotations;
2 namespace FirstApp.Models
3 {
4     public class Employee
5     {
